

A high-angle, aerial photograph of a surfer riding a massive, curling wave. The surfer is positioned in the lower-left quadrant of the frame, wearing a red shirt and dark shorts. The wave is a deep, vibrant blue-green color, with white foam and spray erupting from its crest. The background shows the continuation of the wave's face, leading up to the breaking point. The overall scene conveys a sense of power, speed, and the thrill of surfing.

JetSurf™

CATALOGUE 2015/2016

JETSURF

JETSURF

IS A LIFESTYLE

This is JetSurf, the Ultra lightweight motorized surfboard.

A crossover sport which combines surfing, high octane motor sports and recreational fun, JetSurf is designed to challenge and thrill water sports lovers everywhere.

Take the board by plane to your top destinations and ride with friends.

With Jet Surf you don't need a boat to pull you or a wave to break.

Join a sanctioned racing organisation and ride with sports clubs from around the world.

Get into shape while having a great time.

Weighing a mere 15 kg (dry weight) the boards are easily transported by hand, car, boat and commercial airliner.

JetSurf™

HAND MADE WITH MODERN TECHNOLOGY

The first prototype board was created in a tiny workshop as a result of experimenting with a group of enthusiasts in 1994. After 10 years of development the first JetSurf board hit the market in 2004 and have since been further improved and updated. The JetSurf boards have been extensively tested and refined with over 1 000 enhancements – all pushing the board to be faster, leaner, greener and more dynamic.

There is always room for improvement, therefore the development process is uncompromising and constant. JetSurf takes the utmost care in producing the best and most reliable motorized surfboard in the world.

Each board is especially made to order. The entire production process is conducted by experts combining proven methods and cutting edge technology. No compromises are made on the exceptional quality and build of the boards. 90 % of all parts, and every board is manufactured in the 1 facility to ensure the highest level of quality assurance and control from start to finish.

The production facility also boasts its own foundry, industrial robots and 3D printing to enhance and aid the manufacturing process.

Each board goes through a series of rigorous tests before being released, including 30 minute runs in a testing pool at high revs to simulate engine use in extreme situations.

SPECIAL SPEED CONTROL

Sensitive control handle with ergonomic pistol grip trigger to give riders 100% speed control.

WATER SEALED ENGINE COVER

Unique carbon fiber engine cover with easy screws for fast access.

CORD

Super tough parachute cord to give total support in even the hardest turns.

PADS

Unique footpads from memorized material which provide a custom fit and high comfort for riders' feet in all conditions.

ECU-ZB8

Specially designed Electronic Control unit. Full electronic ignition and accessories for low power use over long periods of riding.

MSR 50.2 HXT

The lightest and most powerful engine in its category. Specially constructed for JetSurf.

UDHP starting system

Special JetSurf designed starter motor. High powered, water sealed for an instant start in all situations.

CARBON BODY

The unique shape of the hull is the result of extensive testing and developed for high speeds, cornering and manoeuvrability.

EVERALDO "PATO" TEIXEIRA

Big Wave Legend and Jet setter from Brazil, Pato takes his job seriously and rides JetSurf in the biggest waves in the world.

KAI LENNY

All – round Waterman, professional surfer and SUP champion, Kai is one of the first to test JetSurf models at his heavy home break on Hawaii´s North Shore.

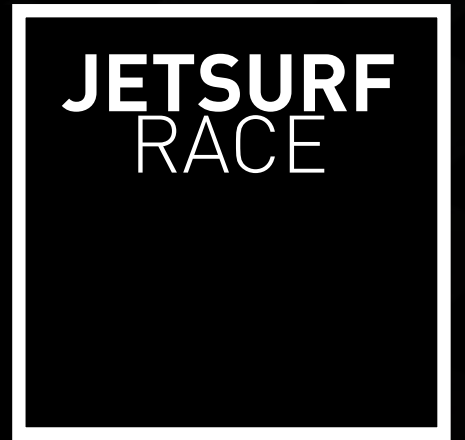

JETSURF
THRILL

MOTOSURF GP – The FIDSM has created one of the most advanced, safe and affordable Motorsports in the world with the Moto Surf GP Race Championship. The JetSurf Raceboards are ultra light high tech water machines, with the ability to be transported via person, car, boat, and plane (as personal luggage on international/domestic carrier flights). This allows all MSGP Racers to travel easily around the world together with their machines – a unique attribute in comparison to other motorized vehicles and motorized sports.

FIDSM – In 2012, the FIDSM (Fédération Internationale du Surf Motorisé) was created in Switzerland, to be the official and overriding organisation for this sport. The increasing popularity and a constantly growing race community has compelled the FIDSM to organize and hold additional races all over the world.

Now in its 5th year running, the World Championship circuit now traverses 7 countries on 5 continents while attracting thousands of fans and racers worldwide. The fastest growing sport in its field, Motosurf GP also engages a huge television and new media audience. The races attract the best riders from around the world, with teams competing in this thrilling contest of nerves, fitness and skill.
